

**Interoperability:
Provider EHR and ASIIS Electronic Data Exchange**

Provider Readiness Checklist –

Complete this check list to see if your practice is ready to start working with ADHS on direct submission from your Electronic Health Record to ASIIS.

- 1) We have been using our Electronic Health Record (EHR) for at least 6 months.
- 2) We have a high speed connection to the internet and are able to connect to ASIIS via our EHR.
- 3) Our EHR has been certified by the Certification Commission for Healthcare Information Technology (CCHIT). If you don't know ask your vendor.
- 4) Our EHR sends and receives electronic data using HL7 messages (version 2.3.1 or 2.5.1). If you don't know ask your vendor.
- 5) Our EHR vendor has a history of supporting our office when we need technical assistance with their product.
- 6) We have access to Information Technology (IT) support when we need it. This support allows us to understand, translate and connect HL7 message protocol errors. If this question is confusing ask your vendor to explain it to you.
- 7) We want to reduce our staff time required to report to ASIIS.
- 8) We want to complete, accurate immunization records on all our patients.
- 9) We want to reduce vaccine wastage by eliminating unnecessary vaccine.
- 10) Our practice is committed to qualify data exchange with ASIIS and will provide the staff time and effort necessary to develop, test and implement the Interoperability: Provider EHR and ASIIS Electronic Data Exchange project with ADHS.
- Did you check off all ten boxes?** If yes, then your practice is ready to get started with interoperability!
